in addition to the three main themes chemical reactors distillation columns and batch processes this volume also addresses some of the new trends in dynamics and control methodology such as model based predictive control new methods for identification of dynamic models nonlinear control theory and the application of neural networks to identification and control provides a useful reference source of the major advances in the field

the asi on nonlinear model based process control august 10 20 1997 antalya turkey convened as a continuation of a previous asi which was held in august 1994 in antalya on methods of model based process control in a more general context in 1994 the contributions and discussions convincingly showed that industrial process control would increasingly rely on nonlinear model based control systems therefore the idea for organizing this asi was motivated by the success of the first one the enthusiasm expressed by the scientific community for continuing contact and the growing incentive for on line control algorithms for nonlinear processes this is due to tighter constraints and constantly changing performance objectives that now force the processes to be operated over a wider range of conditions compared to the past and the fact that many of industrial operations are nonlinear in nature the asi intended to review in depth and in a global way the state of the art in nonlinear model based control the list of lecturers consisted of 12 eminent scientists leading the principal developments in the area as well as industrial specialists experienced in the application of these techniques selected out of a large number of applications there was a high quality active audience composed of 59 students from 20 countries including family members accompanying the participants the group formed a large body of 92 persons out of the 71 participants 11 were from industry

the increasingly competitive environment within which modern industry has to work means that processes have to be operated over a wider range of conditions in order to meet constantly changing performance targets add to this the fact that many industrial

operations are nonlinear and the need for on line control algorithms for nonlinear processes becomes clear major progress has been booked in constrained model based control and important issues of nonlinear process control have been solved this text surveys the state of the art in nonlinear model based control technology by writers who have actually created the scientific profile a broad range of issues are covered in depth from traditional nonlinear approaches to nonlinear model predictive control from nonlinear process identification and state estimation to control integrated design advances in the control of inverse response and unstable processes are presented comparisons with linear control are given and case studies are used for illustration

considers the application of modern control engineering on digital computers with a view to improving productivity and product quality easing supervision of industrial processes and reducing energy consumption and pollution the topics covered may be divided into two main subject areas 1 applications of digital control in the chemical and oil industries in water turbines energy and power systems robotics and manufacturing cement metallurgical processes traffic control heating and cooling 2 systems theoretical aspects of digital control adaptive systems control aspects multivariable systems optimization and reliability modelling and identification real time software and languages distributed systems and data networks contains 84 papers

the high temperature solid oxide fuel cell sofc is identified as one of the leading fuel cell technology contenders to capture the energy market in years to come however in order to operate as an efficient energy generating system the sofc requires an appropriate control system which in turn requires a detailed modelling of process dynamics introducting state of the art dynamic modelling estimation and control of sofc systems this book presents original modelling methods and brand new results as developed by the authors with comprehensive coverage and bringing together many aspects of sofc technology it considers dynamic modelling through first principles and data based approaches and considers all aspects of control including modelling system identification state estimation conventional and advanced control key features discusses both planar and tubular sofc and detailed and simplified dynamic modelling for sofc systematically describes single model and distributed models from cell level to system level provides parameters for all models developed for easy reference and reproducing of the results all theories are illustrated through vivid fuel cell application examples such as state of the art unscented kalman filter model predictive control and system identification techniques to sofc systems the tutorial approach makes it perfect for learning the fundamentals of chemical engineering system identification state estimation and process control it is suitable for graduate students in chemical mechanical power and electrical engineering especially those in process control process systems engineering control systems or

fuel cells it will also aid researchers who need a reminder of the basics as well as an overview of current techniques in the dynamic modelling and control of sofc
