will understanding our brains help us to know our minds or is there an unbridgeable distance between the work of neuroscience and the workings of human consciousness in a remarkable exchange between neuroscientist jean pierre changeux and philosopher paul ricoeur this book explores the vexed territory between these divergent approaches and comes to a deeper more complex perspective on human nature ranging across diverse traditions from phrenology to pet scans and from spinoza to charles taylor what makes us think revolves around a central issue the relation between the facts or what is of science and the prescriptions or what ought to be of ethics changeux and ricoeur ask will neuroscientific knowledge influence our moral conduct is a naturally based ethics possible pursuing these questions they attack key topics at the intersection of philosophy and neuroscience what are the relations between brain states and psychological experience between language and truth memory and culture behavior and action what is a mental representation how does a sign

relate to what it signifies how might subjective experience be constructed rather than discovered and can biological or cultural evolution be considered progressive throughout changeux and ricoeur provide unprecedented insight into what neuroscience can and cannot tell us about the nature of human experience changeux and ricoeur bring an unusual depth of engagement and breadth of knowledge to each other s subject in doing so they make two often hostile disciplines speak to one another in surprising and instructive ways and speak with all the subtlety and passion of conversation at its very best

no organization can survive without iconoclasts innovators who single handedly upturn conventional wisdom and manage to achieve what so many others deem impossible though indispensable true iconoclasts are few and far between in iconoclast neuroscientist gregory berns explains why he explores the constraints the human brain places on innovative thinking including fear of failure the urge to conform and the tendency to interpret sensory information in familiar ways through vivid accounts of successful innovators ranging from glass artist dale chihuly to physicist richard feynman to country rock trio the dixie chicks berns reveals the inner workings of the iconoclast s mind with remarkable clarity each engaging chapter goes on to describe practical actions we can each take to understand and unleash our own potential to think differently such as seeking out new environments novel experiences and first time acquaintances packed with engaging stories science based insights potent practices and examples from a startling array of disciplines this engaging book will help you understand how iconoclasts think and equip you to begin thinking more like an iconoclast yourself

emphasises on evolutionary aspects of neurobiology in model and non model invertebrates this work includes chapters on eye evolution higher cognitive functions in insects circadian rhythms and sleep and more its covers techniques that allow manipulation of activity in specified neurons and investigation of behavior
