in this major new book the author of the bestselling mcdonaldization of society provides an exploration of one of the most innovative

and imaginative sociological theses of the last decade of the twentieth century mcdonaldization part one centres on a discussion of karl mannheim s theory of rationalization the author also assesses the degree to which sociology in general and sociological theory in particular have been mcdonaldized the second part demonstrates the empirical reach of the mcdonaldization process with discussions on work credit and globalization part three moves beyond mcdonaldization to the worlds of new means of consumption and the postmodern perspectives that best illuminate them the author concludes with a re evaluation of the mcdonaldization thesis and its future

simulations are frequently used techniques for training performance assessment and prediction of future outcomes in this thesis the term human centered simulation is used to refer to any simulation in which humans and human cognition are integral to the simulation s function and purpose e g simulation based training a general problem for human centered simulations is to capture the cognitive processes and activities of the target situation i e the real world task and recreate them accurately in the simulation the prevalent view within the simulation research community is that cognition is internal decontextualized computational processes of individuals however contemporary theories of cognition emphasize the importance of the external environment use of tools as well as social and cultural factors in cognitive practice consequently there is a need for research on how such contemporary perspectives can be used to describe human centered simulations re interpret theoretical constructs of such simulations and direct how simulations should be modeled designed and evaluated this thesis adopts distributed cognition as a framework for studying human centered simulations training and assessment of emergency medical management in a swedish context using the emergo train system ets simulator was adopted as a case study ets simulations were studied and analyzed using the distributed cognition for teamwork dicot methodology with the goal of understanding evaluating and testing the validity of the ets simulator moreover to explore distributed cognition as a basis for simulator design a digital re design of ets digemergo was developed based on the dicot analysis the aim of the digemergo system was to retain core distributed cognitive features of ets to increase validity outcome reliability and to provide a digital platform for emergency medical studies digemergo was evaluated in three separate studies first a usefulness usability and facevalidation study that involved subject matter experts second a comparative validation study using an expert novice group comparison and finally a transfer of training study based on self efficacy and management performance overall the results showed that digemergo was perceived as a useful immersive and promising simulator with mixed evidence for validity that demonstrated increased general self efficacy and management performance following simulation exercises this thesis demonstrates that distributed cognition using dicot is a useful framework for understanding designing and evaluating simulated environments in addition the thesis conceptualizes and re interprets central constructs of human centered simulation in terms of

distributed cognition in doing so the thesis shows how distributed cognitive processes relate to validity fidelity functionality and usefulness of human centered simulations this thesis thus provides a new understanding of human centered simulations that is grounded in distributed cognition theory
