the aim of the adhesive interaction of cells has been to assemble a series of reviews by leading international experts embracing many of the most important recent developments in this rapidly expanding field the purpose of all biological research is to understand the form and function of living organisms and by comprehending the normal to find explanations and remedies for the abnormal and for disease conditions the molecules involved in cell adhesion are of fundamental importance to the structure and function of all multicellular organisms in

this book the contributors focus on the systems of vertebrates especially mammals since these are most relevant to human disease it would have been equally possible to concentrate on developmental processes and adhesion in lower organisms a major function of adhesion molecules is to bind cells to each other or to the extracellular matrix but they are much more than glue adhesions in animal tissues must be dynamic forming persisting or declining in regulated fashion to facilitate the mobility and turnover of tissue cells moreover the majority of adhesion molecules are transmembrane molecules and thus provide links between the cells and their surroundings this gives rise to another major function of adhesion molecules the capacity to transduce signals across the hydrophobic barrier imposed by the plasma membrane such signal transduction is crucially important to many aspects of cellular function including the regulation of cell motility gene expression and differentiation the work in this book progresses through four sections part i discusses the four major families of adhesion molecules themselves the integrins green and humphries the cadherins stappert and kemler the selectins tedder et al and the immunoglobulin superfamily simmons part 2 considers junctional complexes involved in cell interactions focal adhesions and adherens junctions ben ze ev desmosomes garrod et al and tight junctions citi and cordenonsi the signaling role of adhesion molecules is the focus of part 3 through integrins and the extracellular matrix edwards and streuli through platelet adhesion du and ginsberg and in the nervous system hemperley in part 4 the aim is to show how adhesive phenomena contribute to important aspects of cell behavior and human health leukocyte trafficking hascard et al cancer metastasis marshall and hart cell migration paleck et al and implantation and placentation damsky et al are the topics considered in depth the different sections are of course not mutually exclusive it is both undesirable and impossible to separate structure from function when considering cell adhesion each chapter has its unique features but some overlap is both inevitable and valuable since it provides different perspectives on closely related topics we hope that the whole contributes a valuable and stimulating consideration of this important topic

the fictional worlds created by many contemporary american and canadian indigenous novelists for young people provide unique access to the lived experiences of indigenous people past present and future and the often inaccessible worlds they inhabit readers age 10 16 will gain many insights about indigenous people and themselves indigenous and non indigenous readers alike through sustained immersion in fictional worlds where indigenous people are foregrounded active autonomous respected and valued

methanol the chemical and energy feedstock of the future offers a visionary yet unbiased view of methanol technology based on the groundbreaking 1986 publication methanol by friedrich asinger this book includes contributions by more than 40 experts from industry and academia the authors and editors provide a comprehensive exposition of methanol chemistry and technology which is useful for a wide variety of scientists working in chemistry and energy related industries as well as academic researchers and even decision makers and organisations concerned with the future of chemical and energy feedstocks

comprised of the latest developments in cell cycle research it analyzes the principles underlying the control of cell division offers a framework for future investigation especially that aimed toward understanding and treatment of cancer

this book is written to transform land disputes toward win win outcomes utilizing the latest sustainable development theory land has always been a source of conflict a contest of competing homelands and ideologies but it can also act as an agency of peace making promoting economic and social development this dualism will be the theme of this book as there is a dearth of studies exclusively focused on land the book s coverage is comprehensive examining land and property disputes with case studies in modern times along with a problem solving approach utilizing such economic theorems as location and growth poles theories the un s sustainable development goals will be used as our over arching framework the overall aim of the book is to transform land disputes toward win win outcomes utilizing latest sustainable development theory
