please note this is a companion version not the original book sample book insights 1 the myths surrounding memory are that it can be improved through memory training but that

you can never improve your memory beyond a certain point however a realistic understanding of what your memory can do can help you achieve that potential 2 memory is a process rather than a structure it is not an identifiable structure and the process cannot be located at an identifiable place in the brain the word memory is simply an abstraction that refers to a process rather than a tangible thing 3 there is no single memory method that will do everything when someone asks how he can improve his memory he cannot expect a useful answer until he makes his question more specific 4 there is no single secret to mastering your memory and most memory techniques are not even secrets many memory training authors and lecturers give the impression that they are letting you in on their own secret memory techniques but the techniques are secret only in the sense that many people are not aware of them

every student has experienced the crushing anxiety of staring at a blank exam paper knowing they studied the material just hours before but finding their mind completely empty the traditional method of cramming reading a textbook over and over until your eyes blur is biologically destined to fail because the human brain is not designed to retain abstract lists of data the mental blueprint introduces you to the method of loci a technique used by roman orators and modern memory champions and adapts it specifically for the high pressure environment of academic testing this guide moves beyond theory to provide a concrete construction manual for your mind you will learn how to transform dry boring information like biological taxonomies or legal statutes into vivid bizarre and unforgettable mental imagery the book teaches you how to map these images onto the layout of your childhood home or your walk to school hacking your brain s evolutionary strength for spatial navigation whether you are a medical student trying to memorize the nervous system or a history major struggling with a timeline of wars this narrative guide gives you the architectural tools to store vast libraries of information in your head and more importantly retrieve them instantly when the clock is ticking

scientific work on mnemonics and imagery conducted in the 1960s and early 1970s was directed at testing enthusiastic claims of the efficacy of memory techniques developed by the ancient greeks and further refined in the popular literature by professional mnemonists the early research on imagery and mnemonics confirmed many of these claims and also illuminated the limitations of some techniques e g bizarre imagery as such these seminal studies clearly were valuable in providing a solid data base and perhaps as important making imagery and mnemonics acceptable research areas for experimental psychologists and educators after this initial surge of work however it seemed that subsequent contributions met with the attitude that mnemonic techniques and imagery help memory what else is new this attitude was not completely justified however given the theoretical insights from the work of such imagery and mnemonics pioneers as gorden bower allan paivio and william rohwer in the 1980s this claim is completely unjustified research on mnemonics and imagery has grown in exciting ways researchers are tapping the areas theoretical potential both in terms of extending basic memory theories to account for the robust effects produced by mnemonic techniques and in terms of using explanations of mnemonic effects to understand basic memory processes individual differences in the use of imagery and

mnemonic encoding activities are also being explored this research has provided valuable information for basic memory theories e g

these two volumes will form the largest single collection of current research in applied memory studies one of the principle areas of expanding research in applied cognitive psychology the books arose from the 2nd international conference on aspects of memory held in swansea in august 1987 the first conference was held ten years ago and contained selected and refereed papers from eminent psychologists working in the field of memory and actively engaged in applied memory research

this text is about the reader being a unique individual human being who comprises of relationships groups families organisations cultures societies and the world it delves into the process of speech communication and how individuals use that process effectively and inefficiently to build those relationships
